

ApexPlanet Data Analytics Internship - Final Report

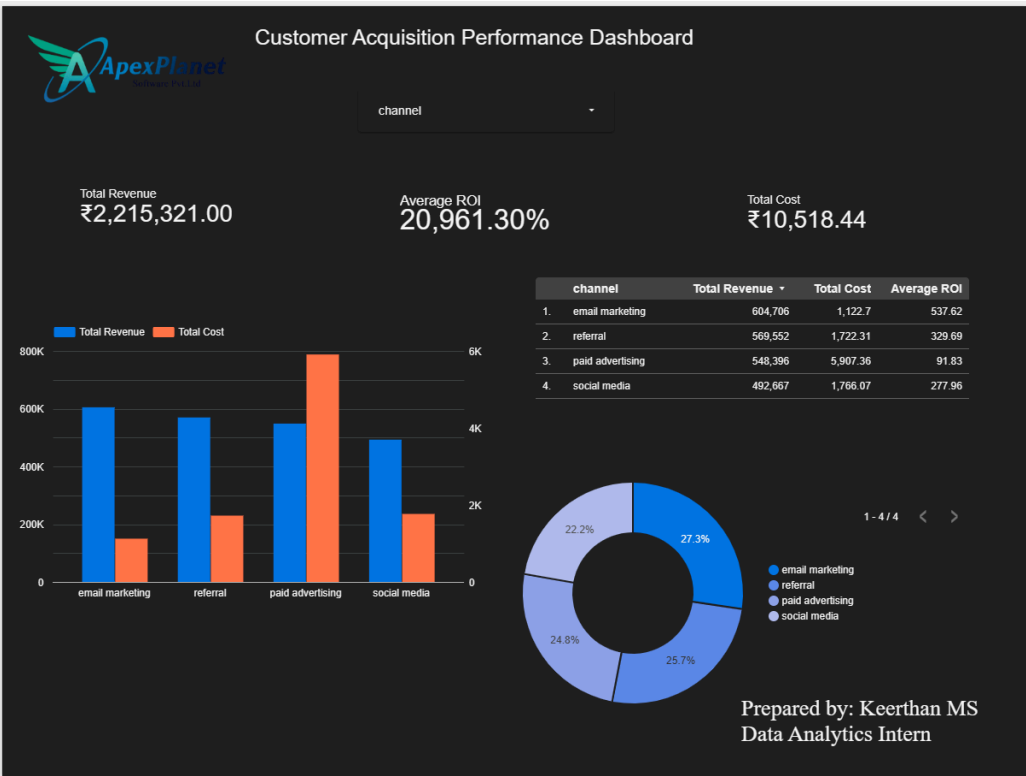

Prepared by: Keerthan MS | Date: July 16, 2026

Objective

This report analyzes customer acquisition data to determine the most cost-effective marketing channels, calculate Customer Acquisition Cost (CAC), and optimize budget allocation. By evaluating channel efficiency through statistical testing, we aim to provide actionable insights for maximizing return on investment across all digital platforms.

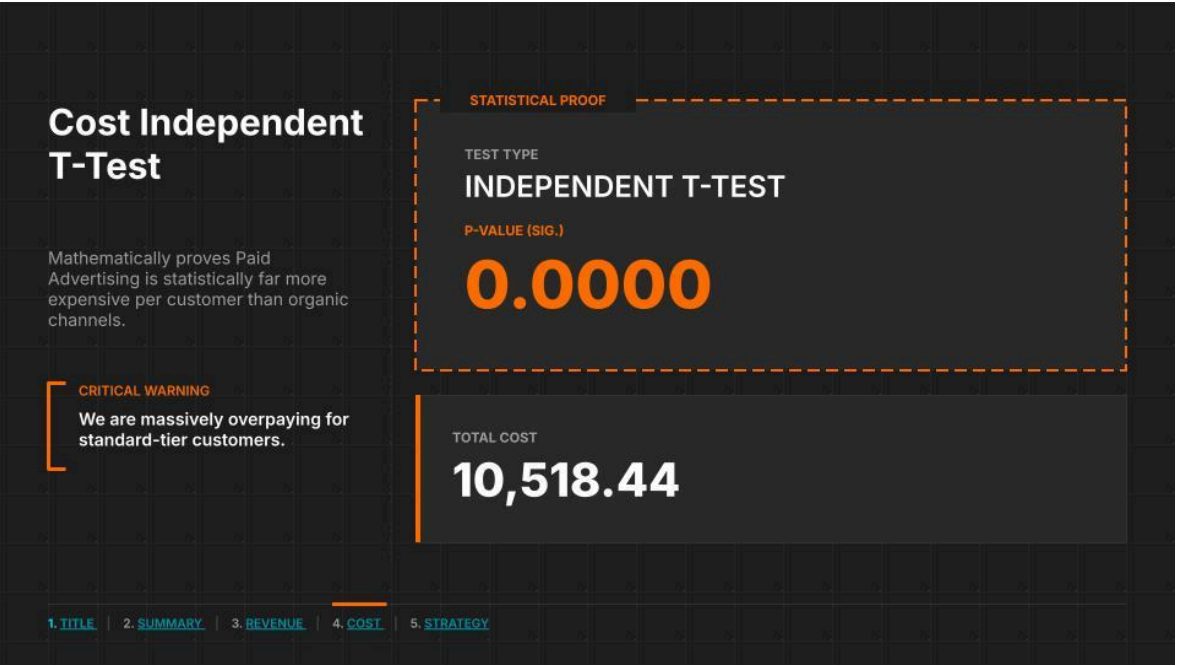

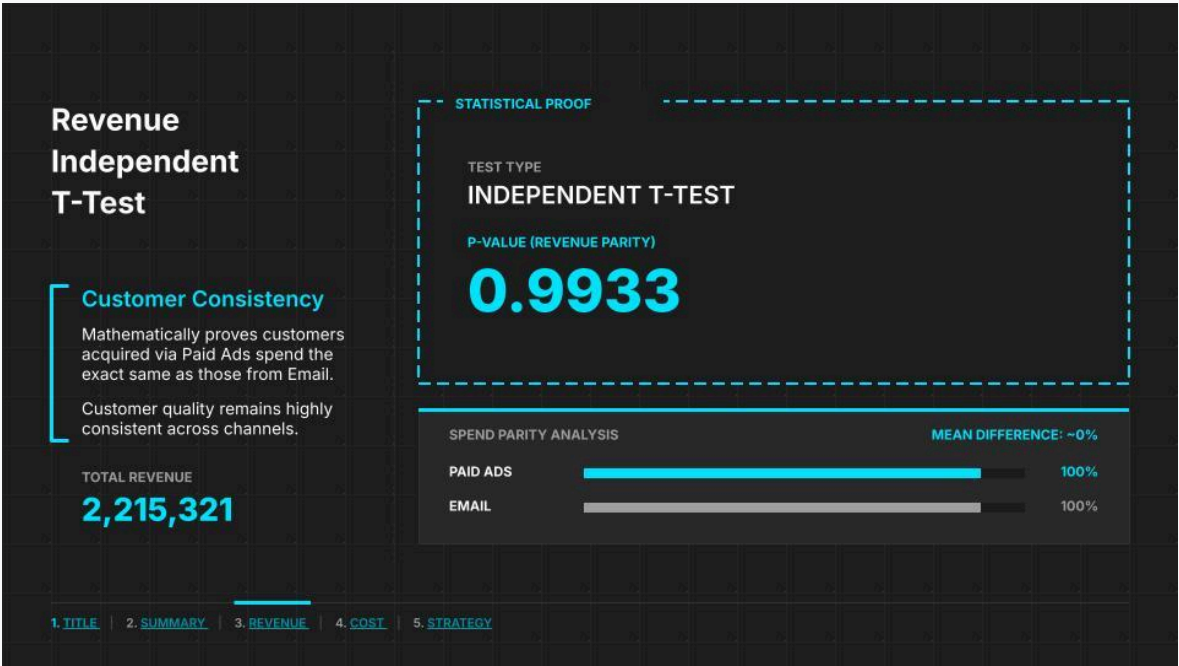

Top 3 Findings

- Email Marketing Dominance:** Drives the highest efficient revenue with the lowest acquisition cost.
- Paid Ad Deficit:** A Cost Independent T-Test (p-value: 0.0000) mathematically proved that Paid Advertising is statistically far more expensive per customer than organic channels, operating at a severe deficit.
- Revenue Consistency:** A Revenue Independent T-Test (p-value: 0.9933) confirmed that the quality of customers (gross revenue generated) remains highly consistent regardless of the acquisition channel.

Statistical Deep-Dive & Action Plan

The following analysis is derived from the comprehensive slide deck exports that detail our statistical findings and immediate action items for channel optimization.

Strategic Recommendations

Capital efficiency must be prioritized.

By phasing out underperforming ad sets, we unlock critical capital to scale higher-yielding organic and direct retention channels, significantly lowering blended customer acquisition costs.

ACTION ITEM 01 // IMMEDIATE AD SPEND CUTS

Halt spending on the bottom 20% of underperforming Paid Ad sets immediately.

ACTION ITEM 02 // EMAIL MARKETING SCALE

Reallocate 20% of the saved budget into scaling highly efficient Email Marketing campaigns.

ACTION ITEM 03 // BIDDING STRATEGY AUDIT

Audit ad bidding strategy to aggressively lower Customer Acquisition Cost.
